

About me

I am a QA Analyst and Software Engineer, passionate about software quality, automation, and innovative technologies. My full stack development background allows me to design and execute effective test cases, identify errors accurately, and collaborate with development teams to deliver reliable solutions.

Skills

- Full-Stack Development
- (Python, JS, React)
- Manual and Automated QA
- AI Tools and Custom GPTs
- Agile Methodologies and Scrum
- Leadership
- Teamwork
- System Documentation
- Database Modeling
- Problem Solving and Critical Thinking

More

- Sports Subcoordinator at PUCEM
- Writer and Poet
- Professor of Philosophy
- Founder of Soft-War League and e-sports manager
- Founder of ReDDevs, the developer community
- Guest caster at UTM SPORT event

Johannes Carofilis Veliz

SOFTWARE ENGINEER AND QA

Experiencia Laboral

Full Stack Developer – Prácticas Preprofesionales

Prefectura de Manabí - February 2024 – April 2024

- Developed back-end using Python and JavaScript.
- Developed front-end using ReactJS.
- Modeled and created databases, provided technical support, and maintained equipment and operating systems.

QA Analyst

APIFSYSTEMS S.A.S – Billease Billing System - April 2025 – October 2025

- Performed manual and automated functional tests, regression tests, and tests in real environments.
- Reported errors clearly in Blue, using methodology and tools to monitor QA quality.
- Collaborated closely with developers and product owners to ensure the software met client requirements and acceptance criteria.
- Contributed to QA documentation, workflows, and continuous improvement initiatives within the team.

Custom GPTs and Consulting Services

Quantum - 2025

- Created custom GPTs.
- Created digital courses on Artificial Intelligence.
- AI consulting services.
- QA services.

Full Stack Developer – PUCEM Outreach Project

Leader of the Group – Health Outreach Project - 2024–2025

Led a multidisciplinary project in the areas of Medicine, Nursing, and Physiotherapy. Coordinated the programmed activities, project planning and execution, and supported integration of digital tools for data management, QA, and report preparation.

FullStack Developer

AEPUCEM – Student Association - 2023–2025

Designed and developed a custom ticketing and access control system using QR codes. Implemented secure ticket generation and validation, provided operational support, and monitored attendance in real time.

QA Analyst

Lupio – Pet Management Platform - 2025 – Present

Performed manual and exploratory testing on mobile and web applications. Identified and documented critical, UI/UX, and usability defects through functional testing and main user scenarios. Collaborated with developers in issue reproduction, defect verification, and regression processes, contributing to the continuous improvement of product quality.

SOFTWARE ENGINEER AND QA

Experiencia Académica

President of the Software Engineering Program - PUCEM

Responsible for managing and organizing events for the program, as well as supporting the Student Association of the university. Founder of Soft-War League, an e-sports tournament league and support network for athletes.

President of the School of Engineering, Architecture and Design

Responsible for representing the students of the School of Engineering, Architecture and Design at PUCE Manabí. Coordinated academic, cultural, and technological initiatives, and currently act as the main representative before university authorities.

Campus Director - Hult Prize PUCEM 2026

Led the organization of the program, coordinating work teams, partnerships, and the preparation of entrepreneurship teams for national and international competitions.

TechWeek 2025 – Artificial Intelligence Competition

- Third place in the AI competition.
- Developed a language system for recommending tourist destinations and travel planning.
- Designed the system to suggest places and plans based on user preferences and context.

Instructor – Data Science and Intelligent Models with Python Workshop

"Data Science and Intelligent Models with Python: From Regression to Genetic Programming."

GCI World 2026 (En curso)

Data Science program from the Matsuo-Iwasawa Laboratory, University of Tokyo.

- Data modeling with Python, NumPy, Pandas, and Matplotlib.
- Machine learning applied to models evaluation.
- Final project focused on solving a business problem.

Founder of Kriuu

Kriuu is a technology community with a STEAM focus, which seeks to integrate different areas around the world of technology through events, workshops, and training programs.

Habilidades

- Manual Testing
- React
- Automatization
- MongoDB
- Test Case Design
- Docker
- Python
- IA
- Bug Reporting
- PostgreSQL
- JavaScript/TypeScript
- Agile/Scrum
